Action Notes

Complaint unfounded. Case closed; no violations issued. No further action required.

Violation Information

Inspection Comments

Initial Complaint: "I'm reaching about because I came across a post on a Facebook group that was concerning to me and others as well. The post states how the animals are treated at the Humane Society of Northeast Georgia in Gainesville, Ga and honestly I'm sickened. They provided a picture of a dogs' "intestines" that had fallen out in the cage after a "botched" surgery... I will link the post below but I believe they need to be investigated or terminate some veterinarians or employees. Maybe you could also tell me what else I can do to raise awareness about the abuse and neglect that goes on. I cannot ignore this because I'm passionate about animals and have them of my own. They deserve so much better."

Unannounced Investigation: Upon arrival executive director, Allison Mayfield, administrative officer, Bob Martin, and Operations Officer, Erica Shepherd, were onsite.

Before discussing complaint, management informed me that "had been fired the previous week due to not performing her job duties correctly. Management stated that had only worked with the facility for approx. 2-weeks before being fired. Management stated that was a part of the vet tech staff. Management stated that was a part of the ve

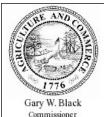

Management and I then went over all medical records of the canines discussed in complaint. The canine with the "botched" surgery where organs had fallen out was canine "Ally" (animal ID #A49770673). Ally came into the shelter on 3-15-2022 with puppies. On 5-4-2022 was spayed; no issues were noted per surgery. On 5-6-2022 during morning rounds, medical team members found canine with intestines hanging out; she was then rushed to Animal Medical Care (DVM Denise Funk). Ally was discharged from vet with instructions on 5-9-2022; no further issues noted. Ally was adopted out on 6-5-2022. Management was able to provide proof of all medical records.

Management and I next discussed the photo of the dog with an imbedded collar scar around the neck. Management informed me that they did not know which canine this was due to photo being taken in 2019 (as stated by ex-employee on Facebook) and having no reference name or animal ID number to look up canine history. Management did inform me that they are contracted with the county to take in strays and pull many animals from the county shelter, and this canine may have been one of them.

The third canine in question, "King" (Animal ID #A49695946). King came into the shelter on 3-1-2022 as a puppy with 11 other litter mates. King was adopted out on 4-21-2022. On 6-9-2022 King was returned to the shelter by adopters due to a severe skin infection on his back and were unable to provide adequate treatment for him. While in the shelter, King was placed on a treatment plan where his skin began to heal. Once King was healed, he was adopted out on 8-7-2022. Medical documentation of King audited upon investigation.

Management stated that the community clinic has not performed community spay/neuters since approx. April, due to being short staffed. Community clinic is currently only offering low-cost vaccinations, preventative treatments, etc. Community clinic side appears to be clean and in good repair. Note that Dr. Binu has been working with the shelter full time for approx. 2-3 months now.

After going over complaint and records, Ms. Shepherd and I then walked through the shelter to observe animals onsite. I observed All felines and canines to be separated by age, size, and health status. I observed all animals to have access to clean water and food. I observed employees/volunteers actively cleaning enclosures throughout investigation. Ms. Shepherd pulled out a canine and feline with paper collars the shelter uses as IDs; two fingers fit between all collars. Ms. Shepherd informed me that staff checks collar tightness every day and must sign off that they have all been checked; I observed the sign off sheet. All areas of the shelter appear

to be clean and in good repair.

All animals with any medical issues appear to be under the supervision of Dr. Binu; health records observed. Note that I observed one feline "Buttercup" who had recently had surgery for spay and umbilical hernia repair on 8-17-2022; I observed the incision area to be clean; however, it was slightly swollen (no redness observed). Documented that due to large hernia repair, swelling is normal; however, will be monitored for swelling to go down.

All animals onsite appear to be receiving humane care at this time. Facility appears to be in compliance with GDA rules and regulations; no violations observed upon investigation.

Animals onsite: 45 felines and 84 canines.

GDA CA/EQ manager, Jason Smith, was informed of my findings.

Complaint appears to be unfounded; therefore, I am closing this case. A copy of this report will be sent to manager Smith and ericasheppard@hsnega.org.
